list of encoded characters

for version 2.100

This document lists the characters in Junicode 2 that can be entered from the keyboard—that is, those with Unicode code points. Many other characters are accessible via OpenType features—for example, small caps, petite caps, and most ligatures. Note that characters with code points beginning with hexadecimal digits E and F belong (with few exceptions) to the Private Use Area. Almost all of these characters can be produced in a more accessible way via OpenType features, for which see *Specimens and User Manual*.
